

Six things you didn't know about ChatGPT, Stable Diffusion and the Future of Generative AI

Sintesis

Soon AI will be affecting the way that you work, like it or not.

Six things you didn't know:

1. Big Tech's last generation of billionaire founders are back in the trenches

Among others, powerful people are investing their time on AI.

Bill gates is having a lot of meeting to integrate AI to the suite of microsoft and Sundar Pichai (CEO of Google) wants to counteract.

2. ChatGPT almost wasn't released

ChatGPT wasn't completely loved by their developers; OpenAI decided to focus on other stuff but at the end a fire was lit and ChatGPT saw light.

3. ChatGPT forced OpenAI to delay development on GPT-4

The success of releasing ChatGPT provoked an overload of the servers and using the supercomputer that was planned to train GPT-4 was necessary to support all the requests that users sent to ChatGPT.

4. Stability's Faustian bargain

Amazon provided > 40,000 GPUs to train stable diffusion.

5. 'Money laundering' in the cloud

There's no transparency beneath the computing hype, and the CEO of hugging face has called this phenomena as 'Money Laundering'.

6. AI's end game?

AGI pretends to beat human general intelligence. Is it coming to break capitalism for once and for all?

Comentarios

I think AI in the news seems pretty dramatic, scary, uncontrollable and I'd say that is understandable. But in reality I like to think that it's moving at its own pace and we're still way to far to reach several goals.

However, I reckon that AI is changing everything little by little; but that's happening in a good way. Let's believe that these changes are for better.
