

# LABOR DISTRIBUTION IN MEXICO

SARA CAROLINA GÓMEZ DELGADO  
LUIS EDUARDO ROBLES JIMÉNEZ

# Background

Labor in Mexico is an important topic that has been the subject of many discussions. The Mexican workforce is diverse and comprises countless workers who are engaged in various sectors such as agriculture, manufacturing, services, and more.

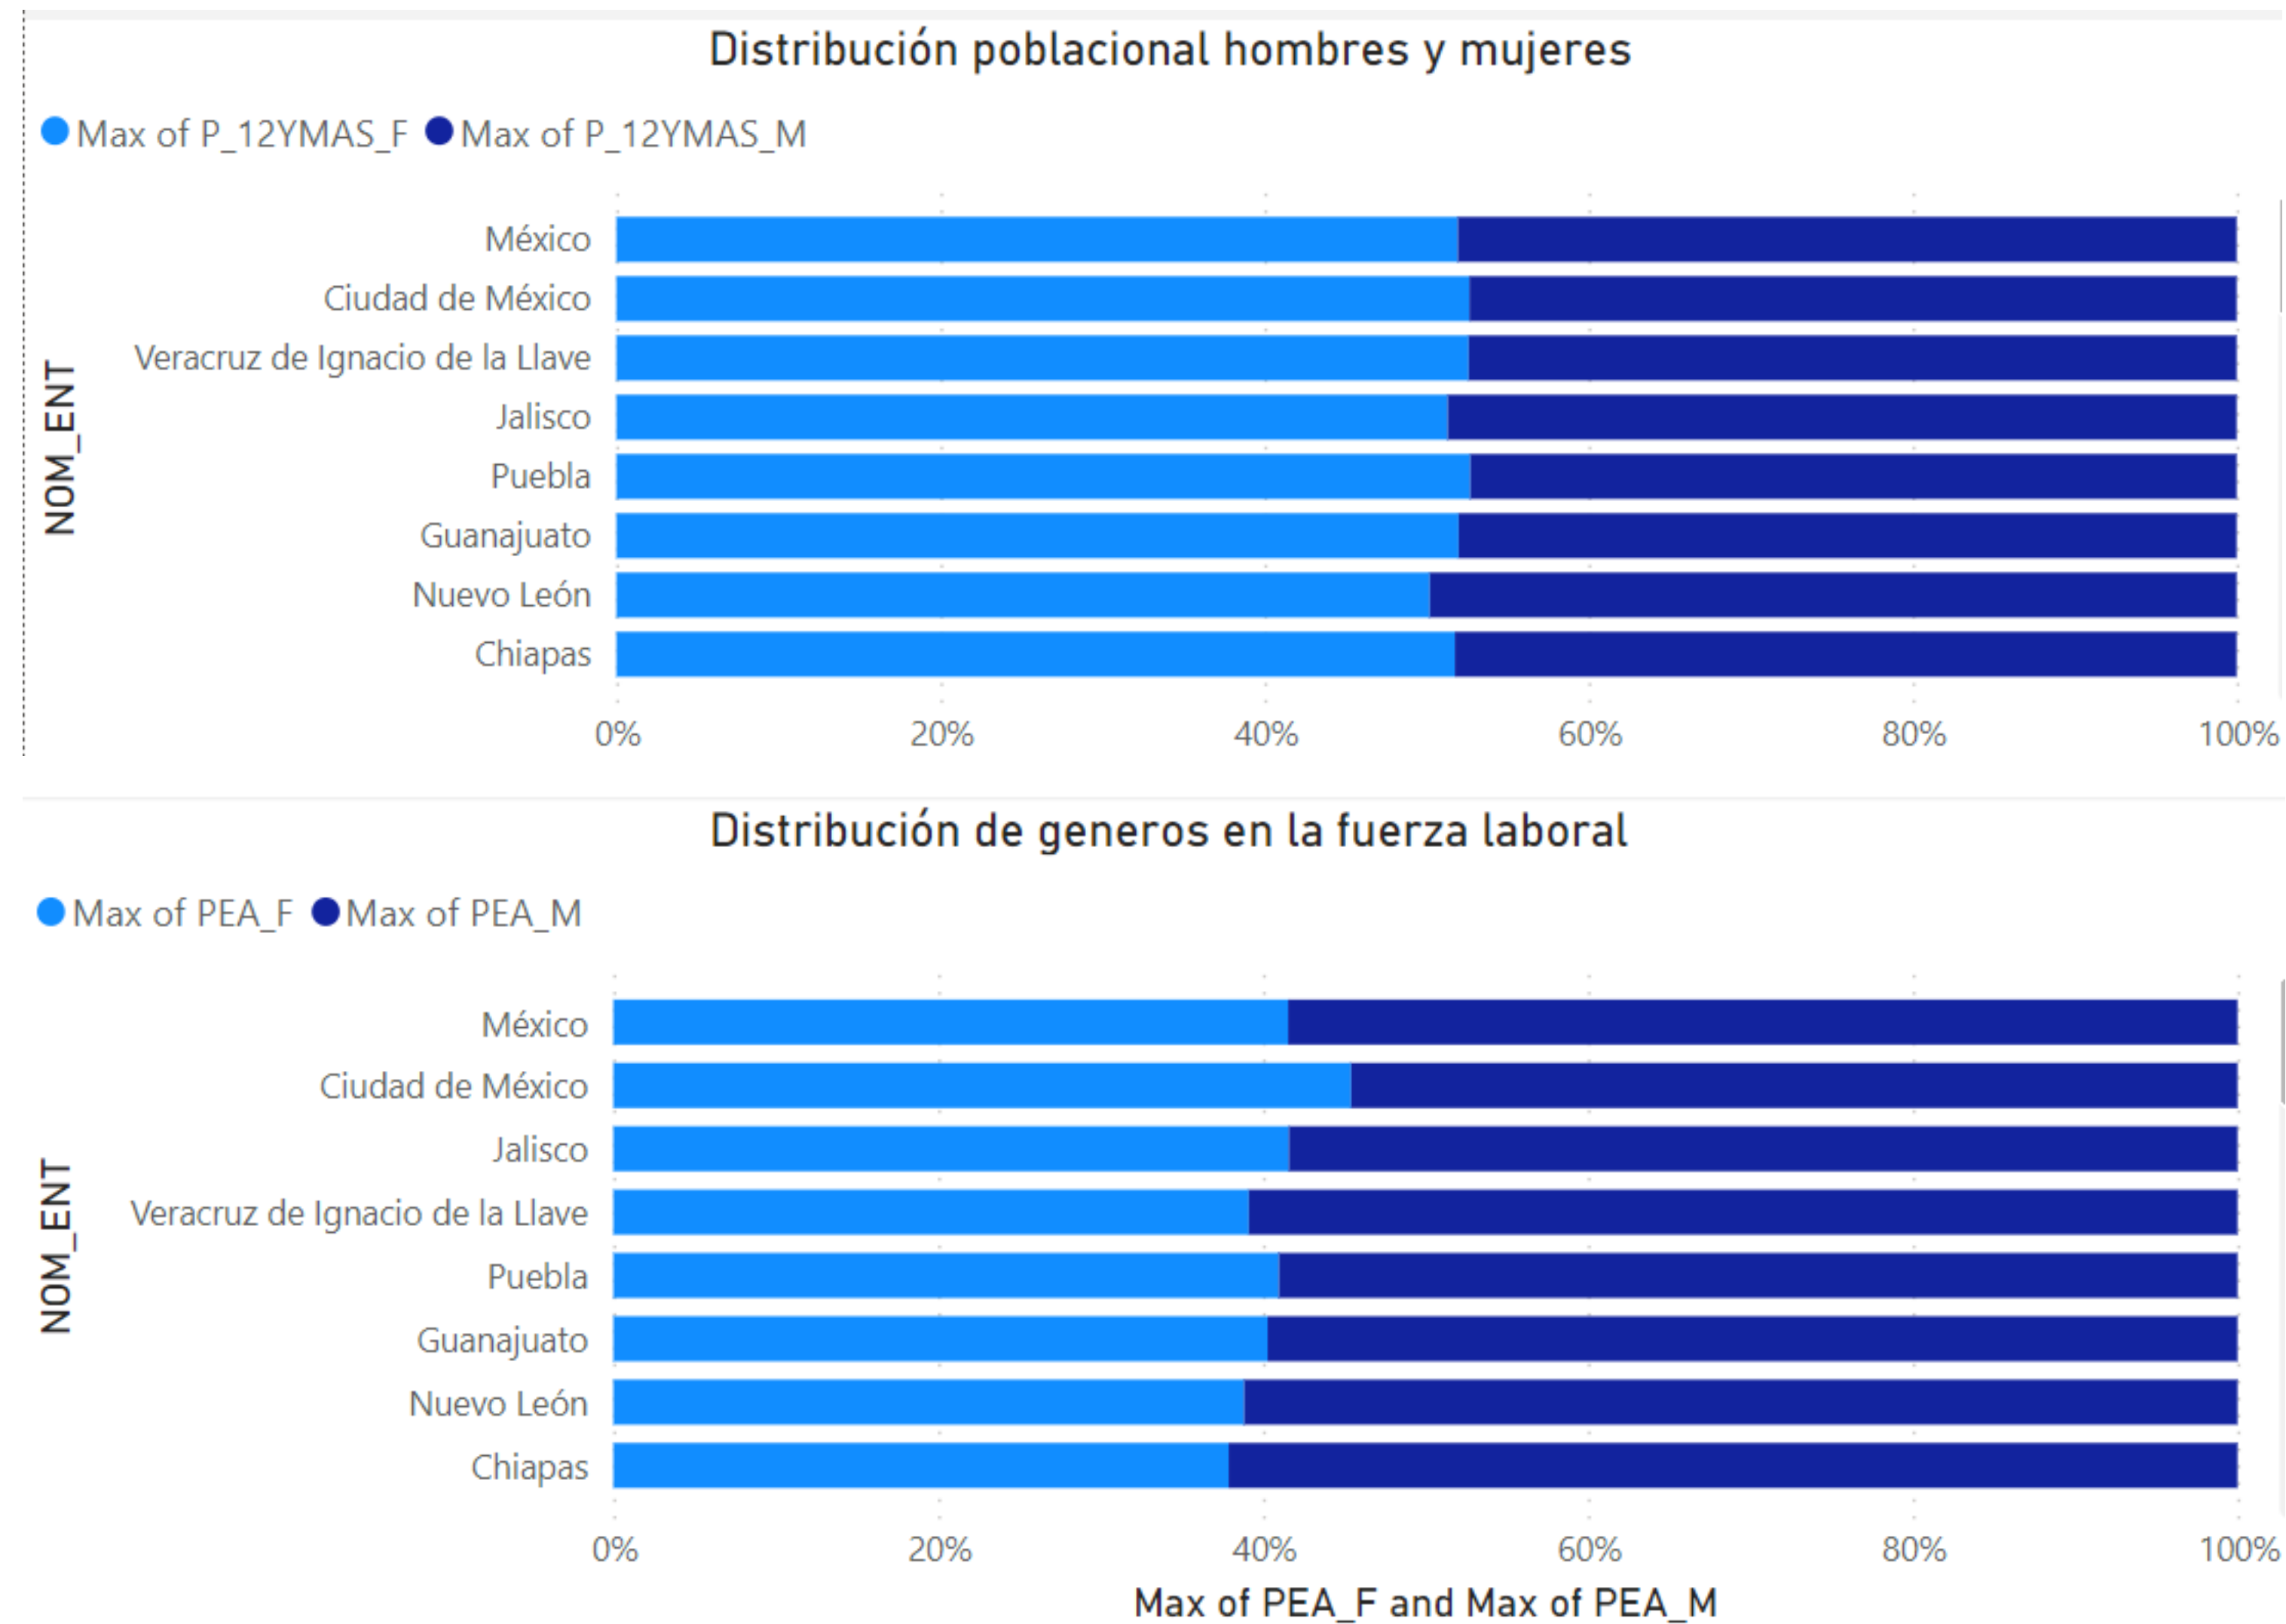

# Problem

Perform an exploratory analysis of the workforce in Mexico. Its social implications and consequences.

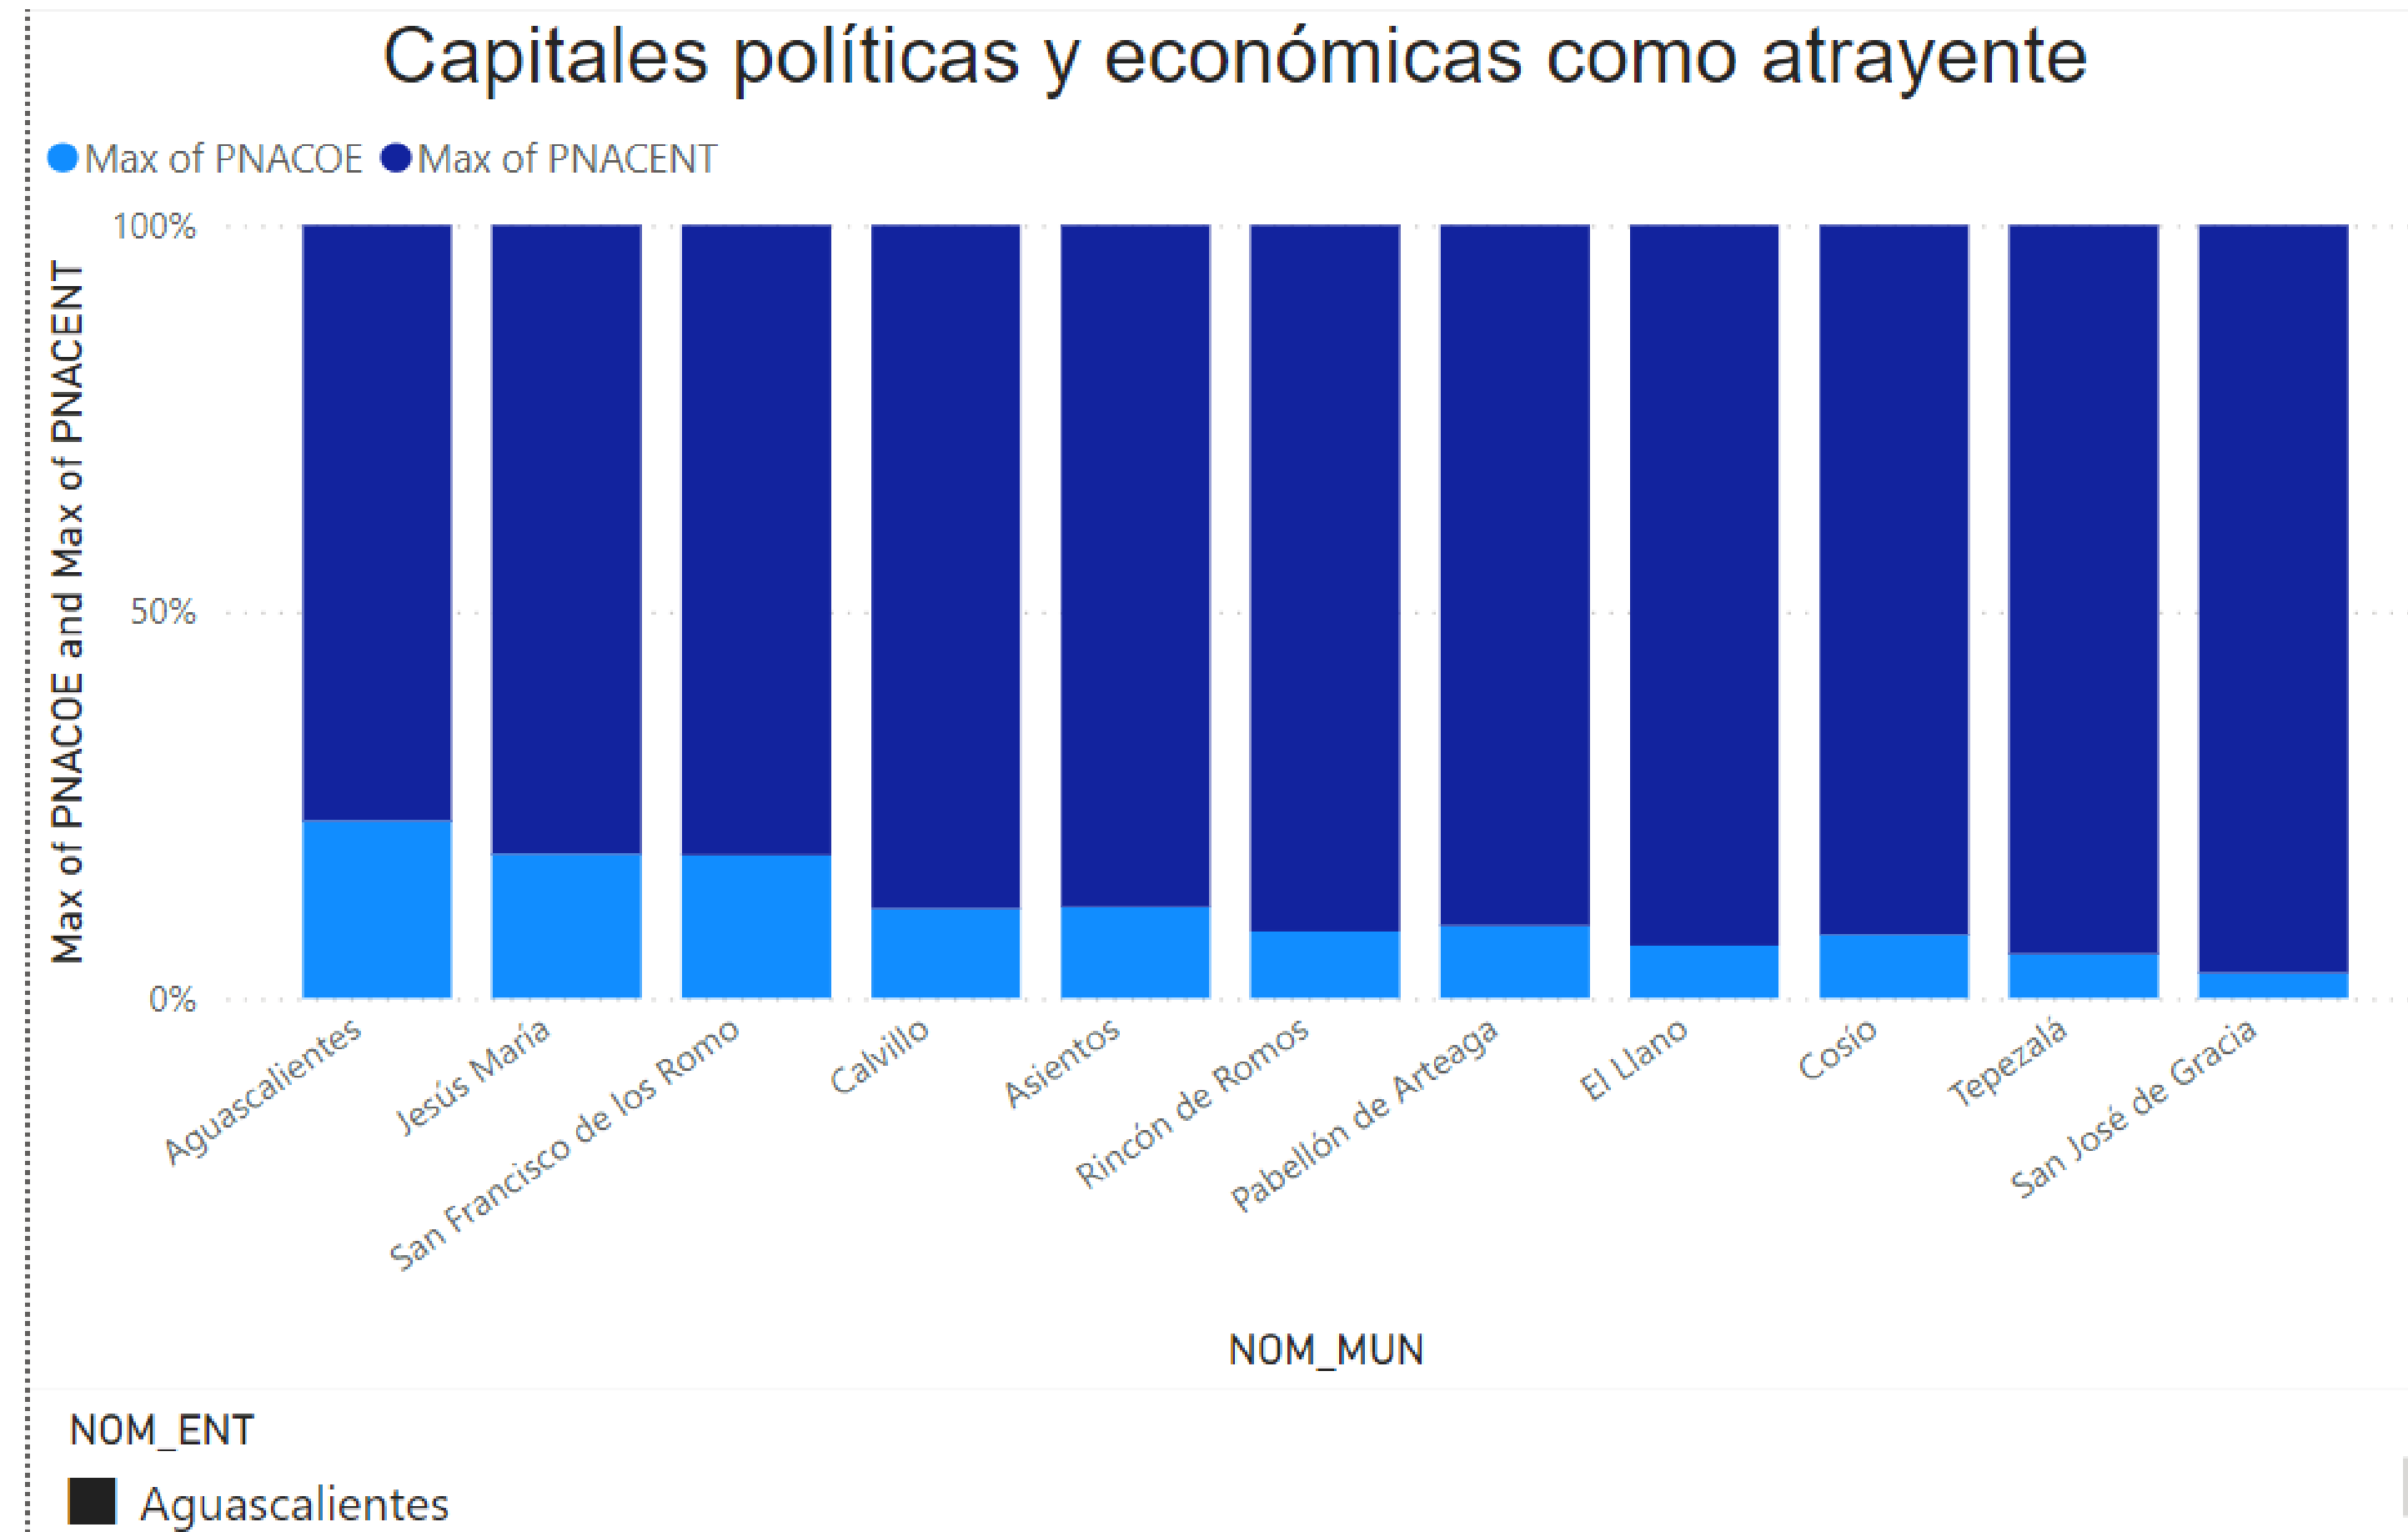

Understand and explain the behavior of society in the following topics:

- Gender distribution
- Working people
- Jobs as people attractor
- Health services behavior
- Illiteracy

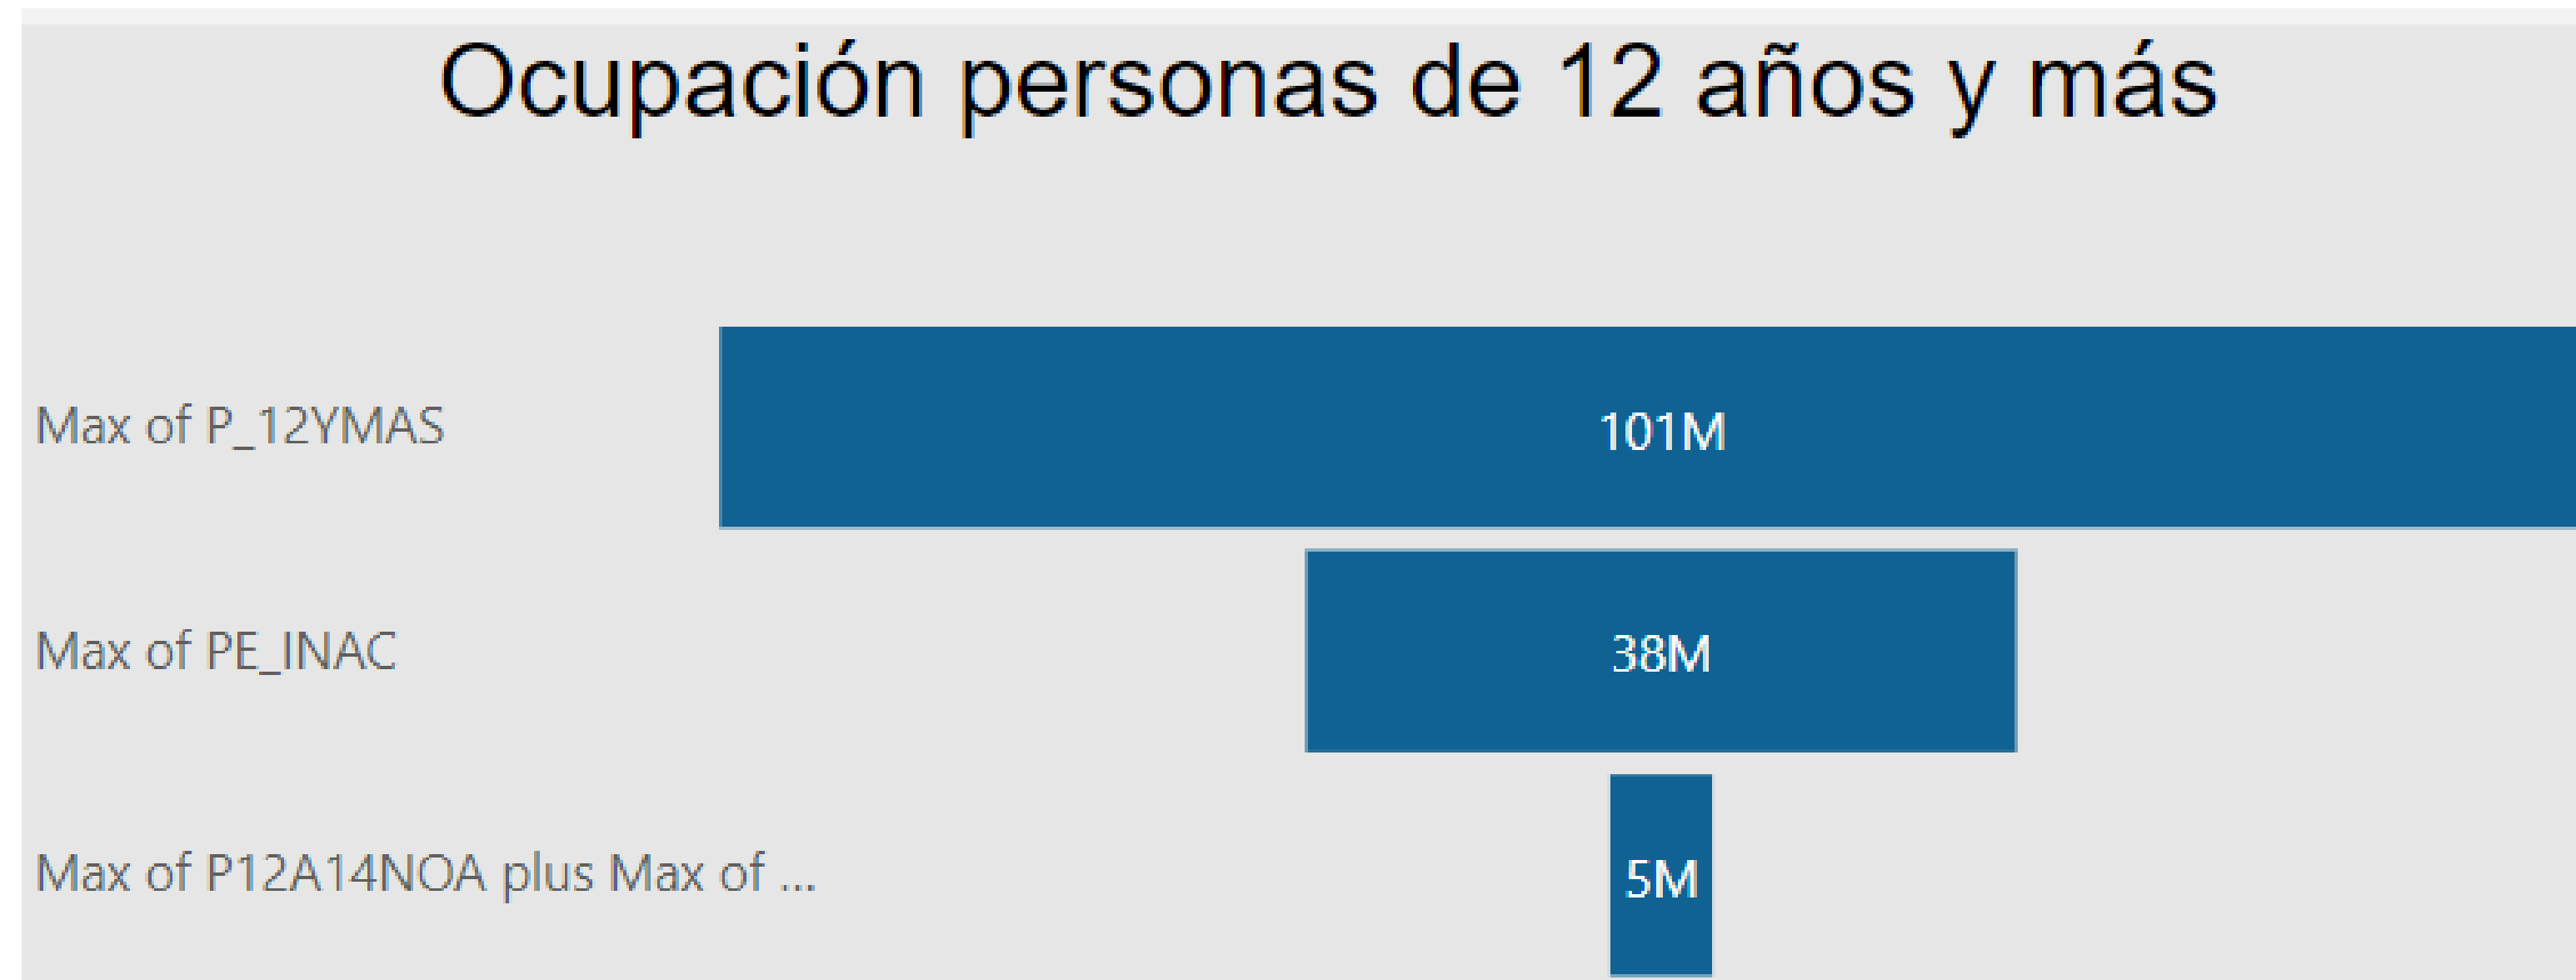

## Gender distribution

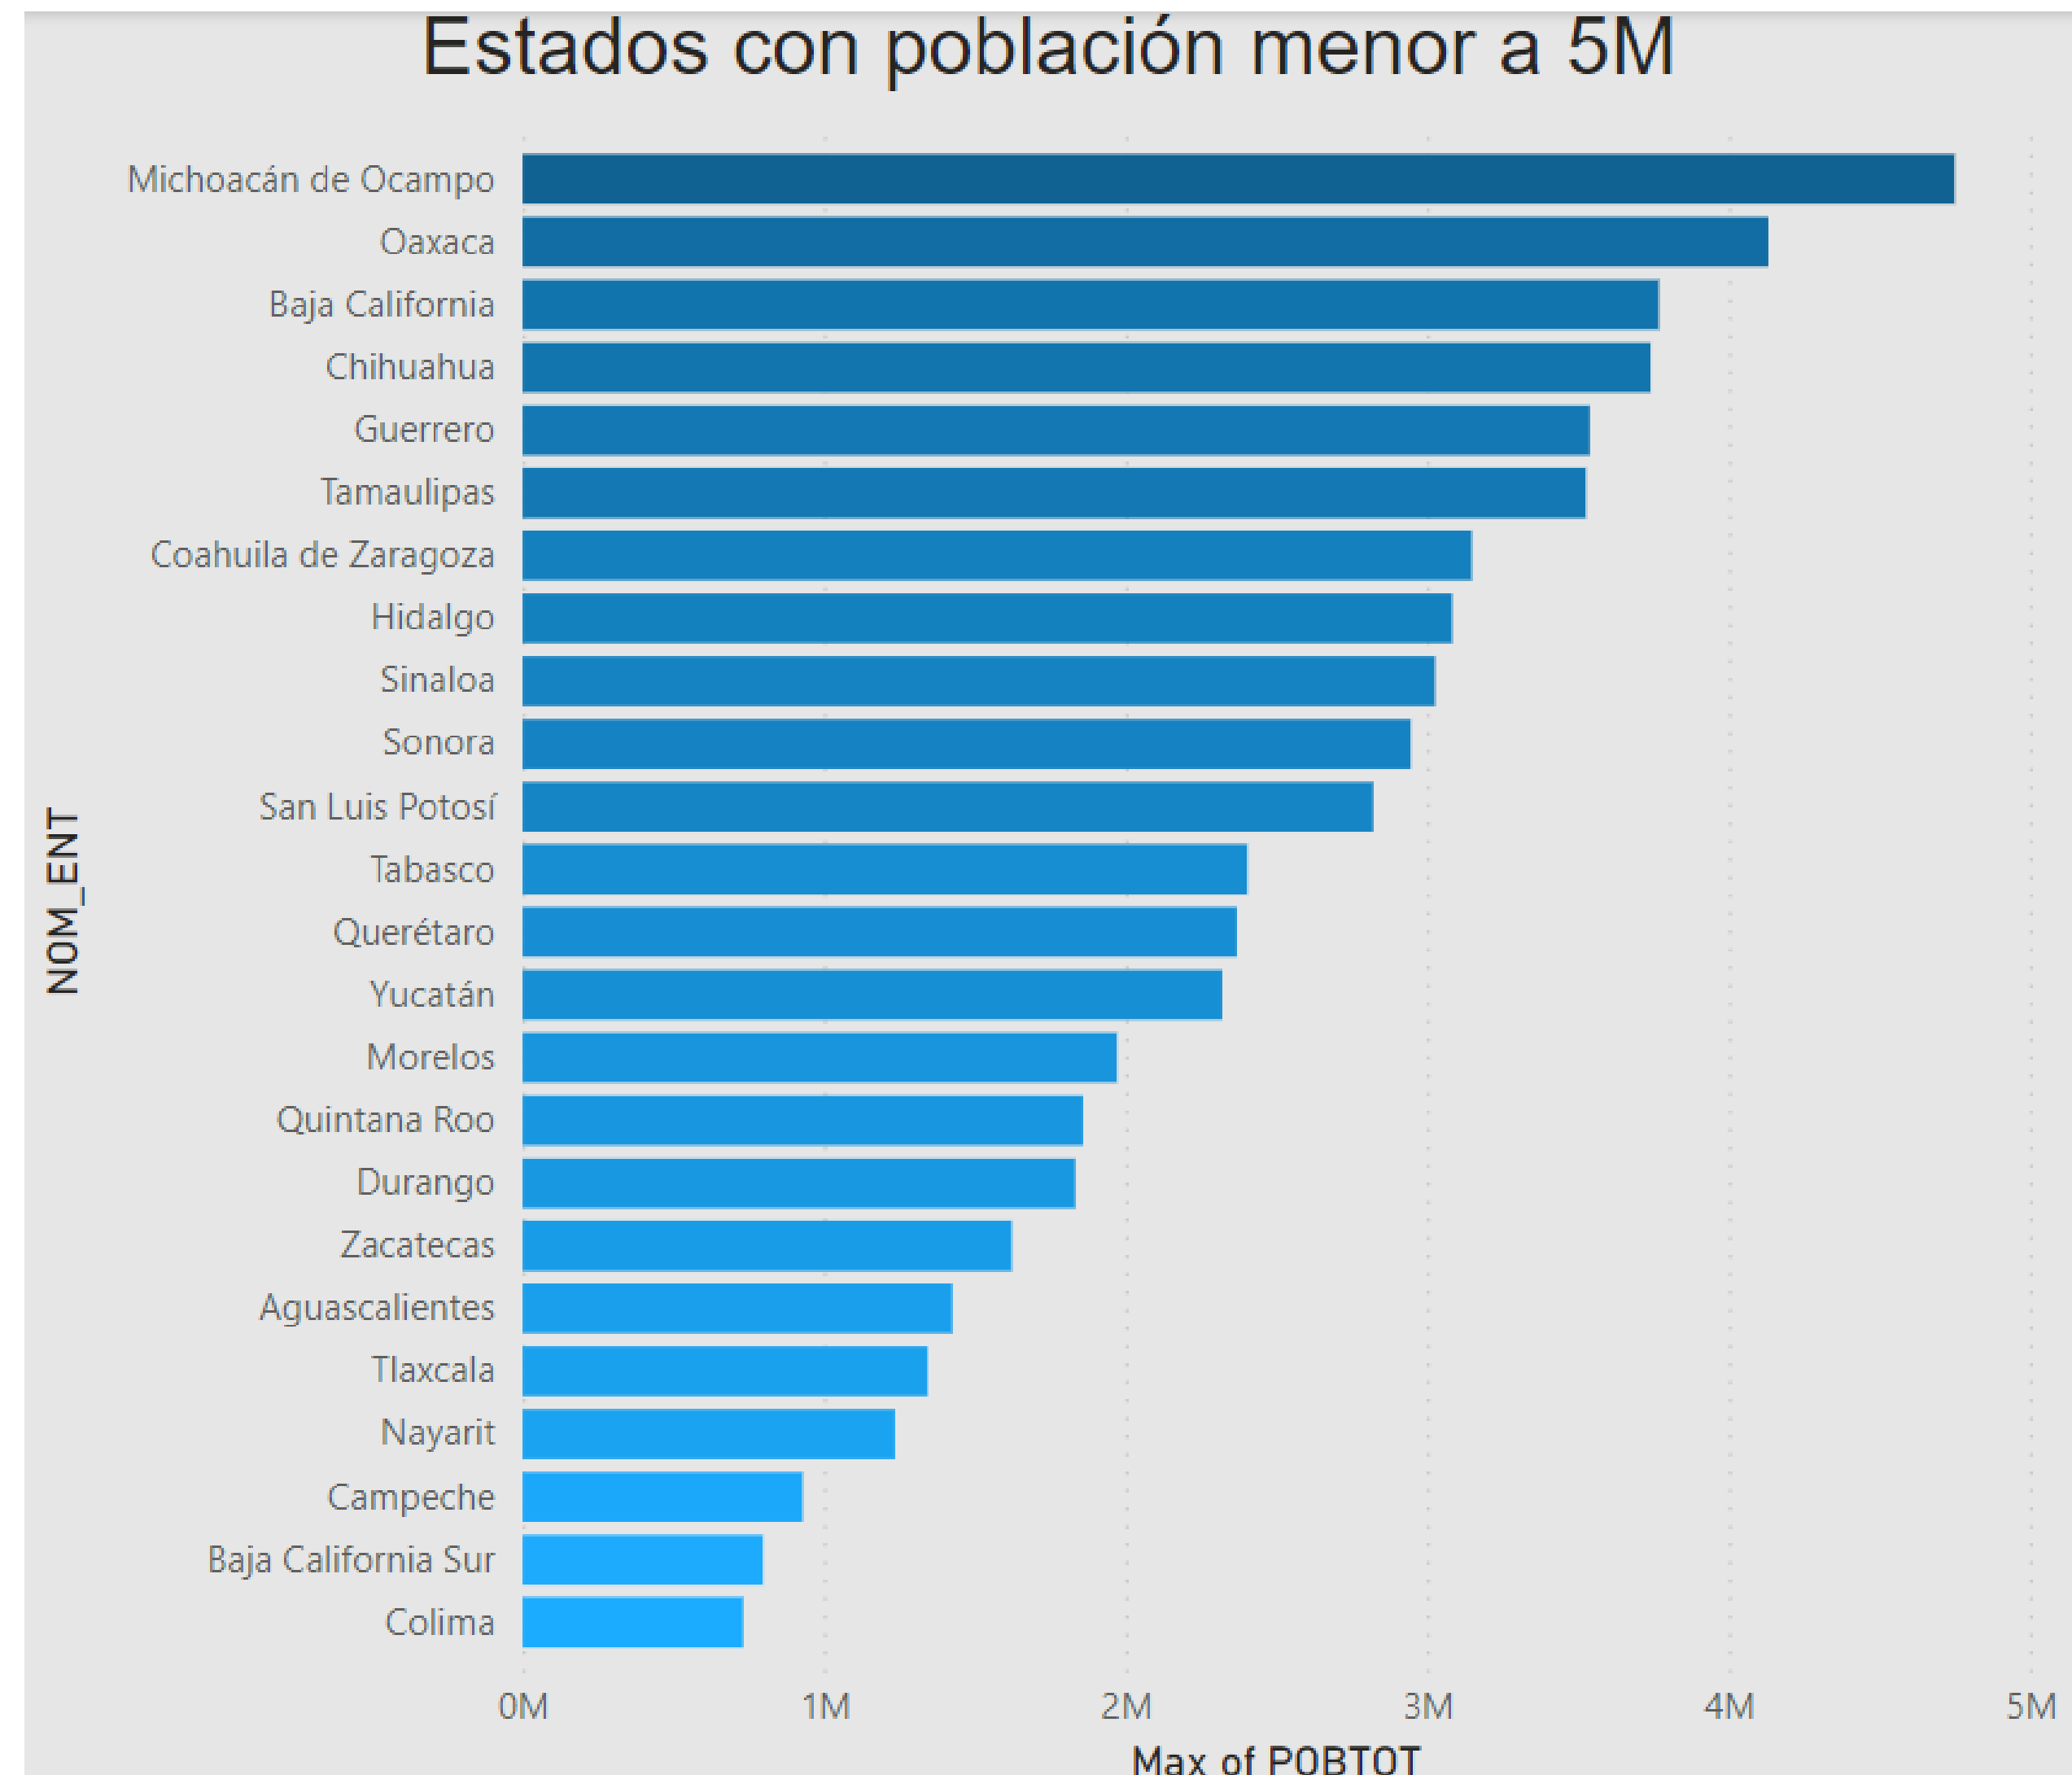

Zacatecas keeps the record with the smallest proportion of women working. Being 36% women and 64% men in its workforce.

# Approach Working people

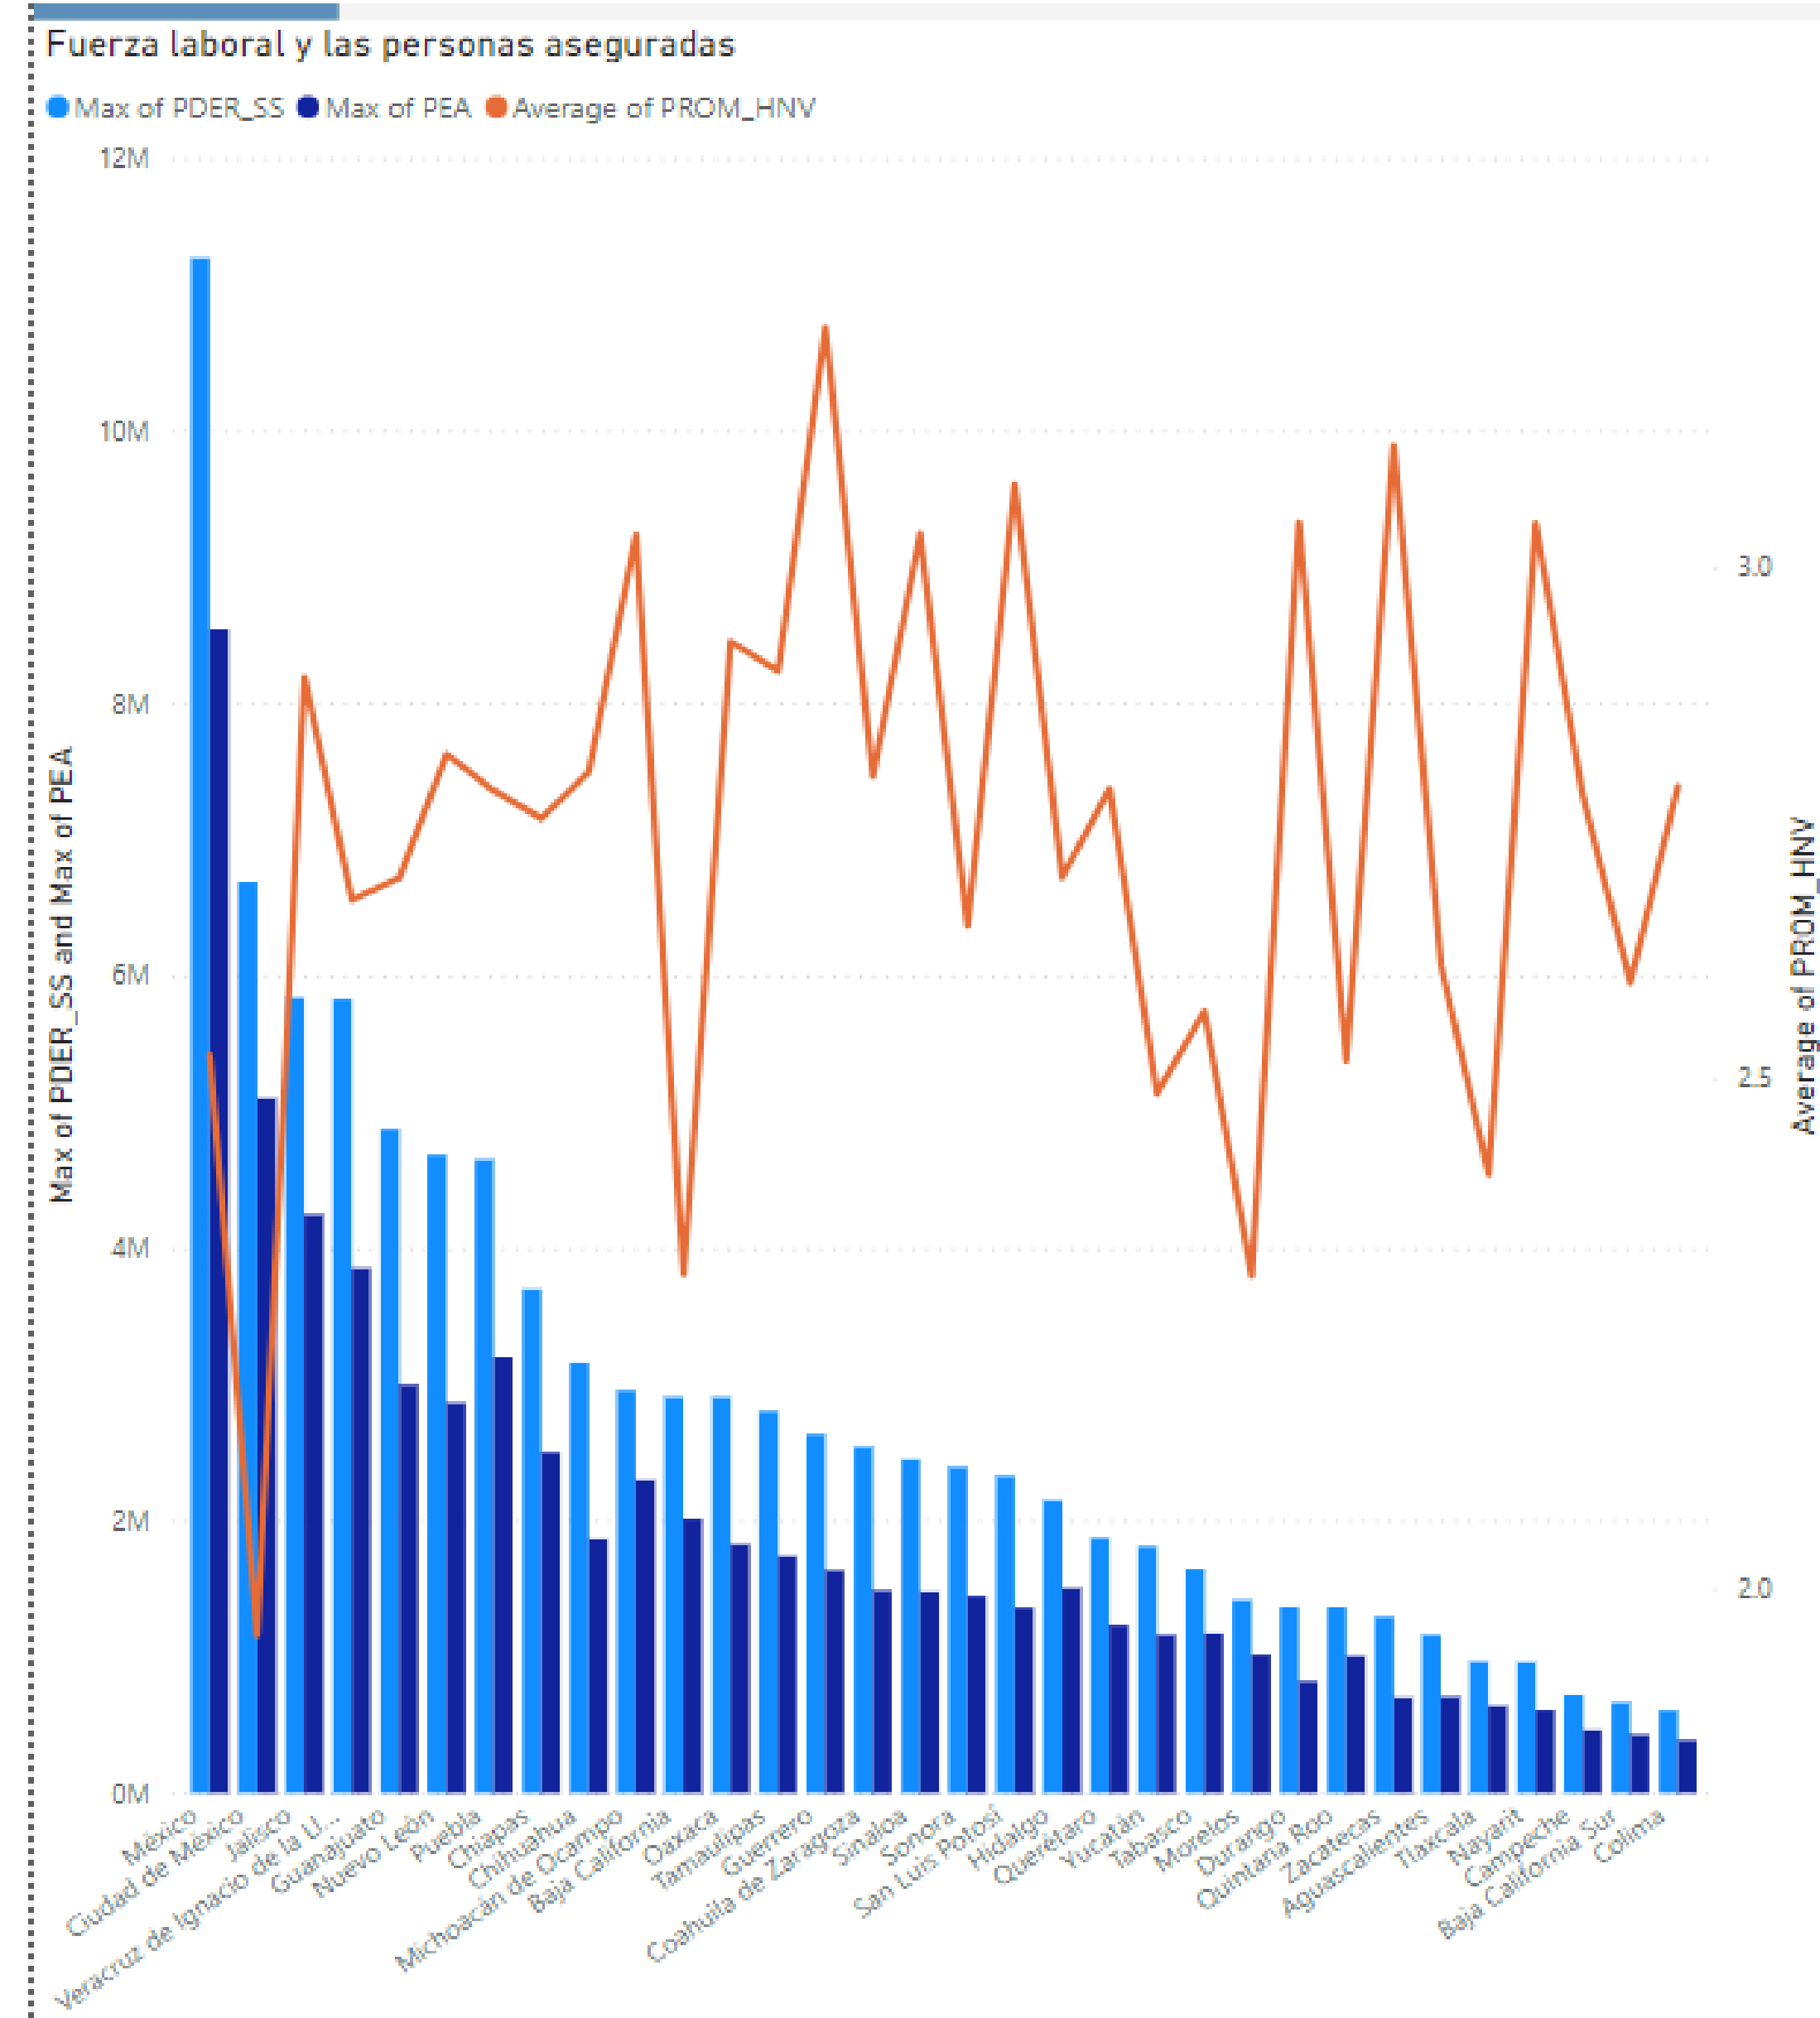

# Approach Health services behavior

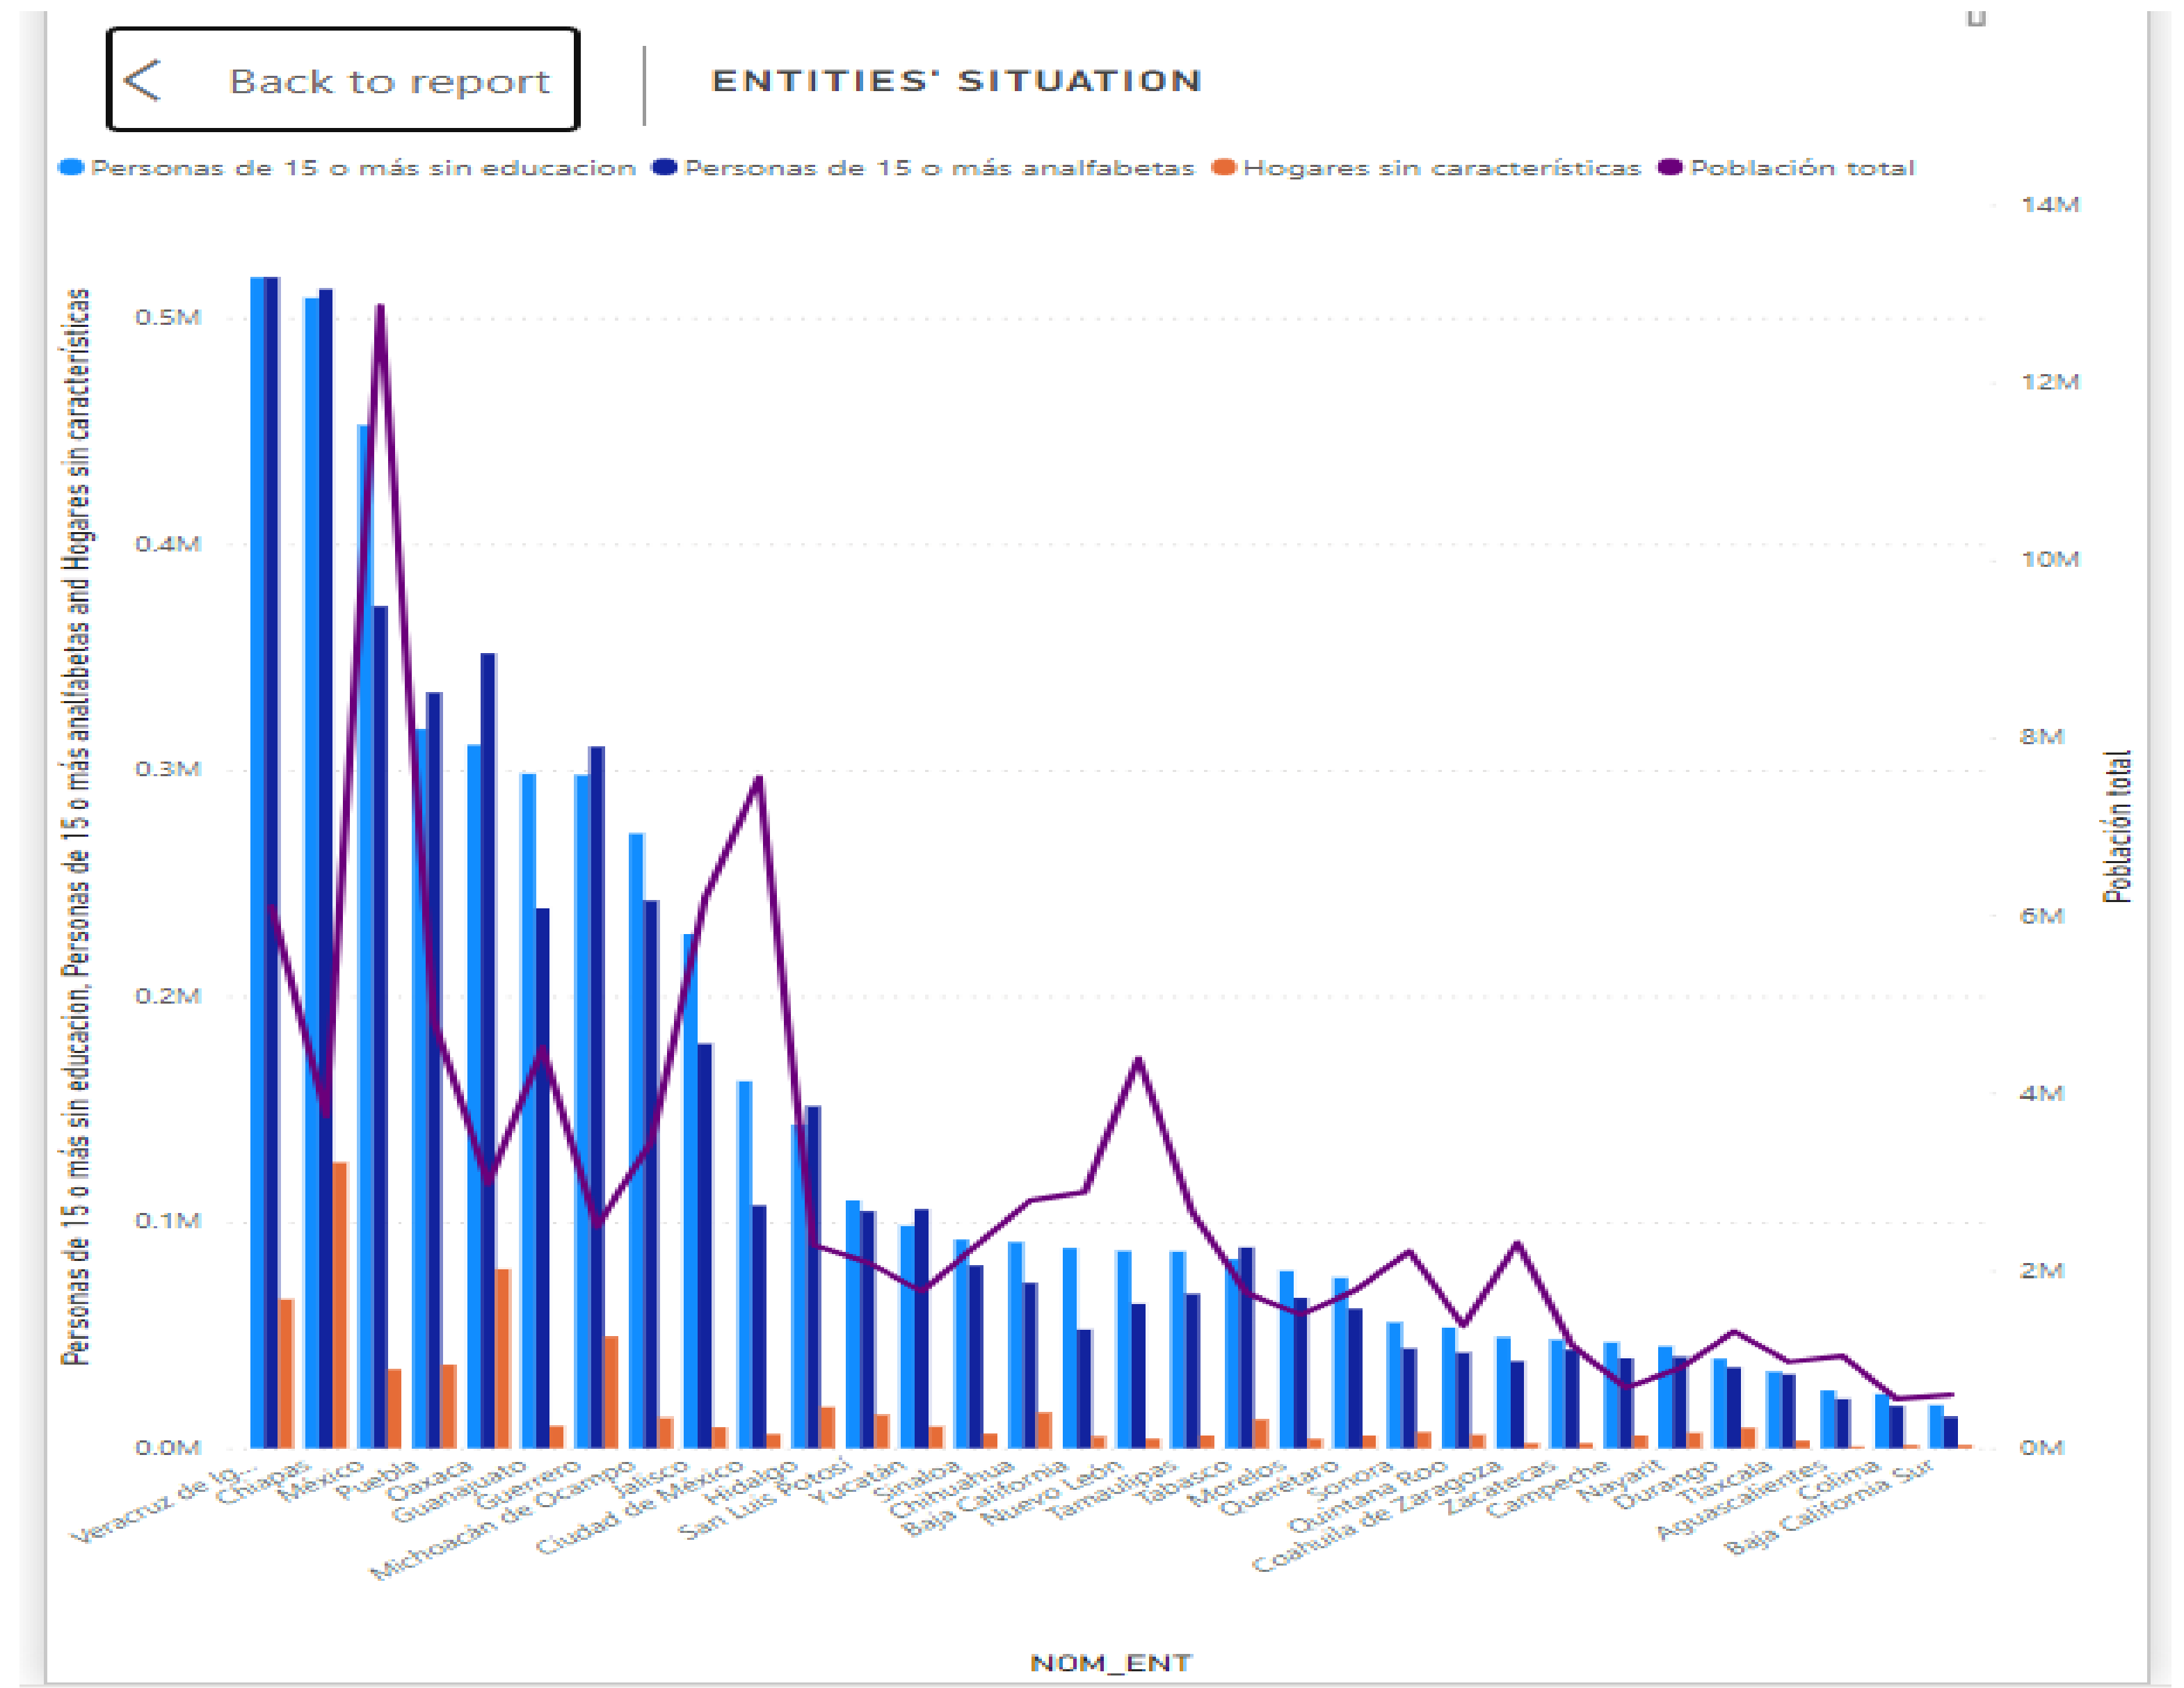

Here we can see the relation between the workforce and people under any insurance services (lighter bar). The polyline represents the average number of children by family, and we can spot something interesting. Counter-intuitive?

# Approach Illiteracy

What can this graph tell us about the wellbeing of an entity?  
- Chiapas

# REFERENCES

This analysis was made from [Inegi's 2020 census](#)
